

LOAN WORKSHEET #1 – ASSET BASED LENDING

Asset Base Lending (ABL) is a specialized loan product that is fully secured by collateral such as inventory, accounts receivable, equipment or other assets of a company. These loans are structured to provide a flexible source of working capital as borrowers may be highly leveraged, operate in a highly volatile or seasonal industry, or may be experiencing rapid growth. ABL is also used by healthy companies seeking greater flexibility in executing operating plans.

The primary source of repayment for revolving ABL credits is the conversion of the collateral to cash over the company’s business cycle. Loan advances are limited to a percentage of eligible collateral (the “borrowing base”). Strong controls and close monitoring are essential features of ABL. ABL lenders may also provide term financing for borrowers requiring longer-term capital or funding needs.

The primary risks associated with ABL are credit, operational, compliance, strategic, and reputation. Price and liquidity risks may also be applicable to the extent the bank syndicates or sells ABL loans.

<p>A. Determined the level of customer credits arising from disputes and returns? (Inventory is sold and becomes an account receivable. Occasionally, the customer is dissatisfied with the product and returns it. The returned item becomes a customer credit. The percentage of returns is sometimes referred to as “dilution.” A company which experiences a significant volume of dilution may be overstating the amount of sales and accounts receivable in its financial statements.)</p> <ul style="list-style-type: none"> • Are they of sufficient volume to cause concern? <p>B. Evaluated concentrations in accounts and the financial strength of the largest accounts?</p> <ul style="list-style-type: none"> • Does the volume of concentrations result in transferring credit risk to the large accounts? • If so, is there sufficient information to analyze the credit-worthiness of the account customer (i.e. a Dunn & Bradstreet report)?
